Professional Experience

Portfolio Work

October 2025 - Present

- Combined vector calculus, GPU programming, and a novel meshing algorithm to create sdf2stl.saej.in, a web application used to design 3D models with signed distance functions and export them for 3D printing.
- Created a typed web worker framework based on composition of coroutines for words.saej.in, a collection of tools useful for solving crosswords, finding anagrams, and making word puzzles.
- Utilized the Bluesky API with followsfollows.saej.in to answer "Who are my follows following?"

Full-Stack Engineer

Agrippa Technology – Las Vegas, Nevada

May 2025 - October 2025

- Orchestrated a live migration from a Java backend to a Supabase serverless architecture.
- Implemented a row-level security strategy to support fast-paced agentic development in a startup environment.

Independent Software Consultant

Power Law Systems – Fort Wayne, Indiana

March 2024 - May 2025

- Created a content management system (CMS) for a nonprofit event website that enabled non-technical staff to make updates without developer involvement, freeing the team to focus on feature development.

Assistant Research Programmer

Center for Research Computing – University of Notre Dame

July 2019 - April 2021

- Extended the Django admin site to empower the client to manage user accounts independently.
- Organized lightning talks to facilitate interdepartmental knowledge transfer.

Education

B.S. in Computer Science Honors; Minors in Mathematics & Psychology

Purdue University – West Lafayette, IN

May 2019

Technical Skills

Tools: Bash, C, C++, C#, Docker, Git, GLSL, Java, JavaScript, Linux, Node.js, OpenSCAD, Postgres, Python, React, SQL, Supabase, TypeScript, Unity, WebGL, 3D Printing

Techniques: Agentic, Agile, Functional, Object-Oriented, Streaming, Literate, Meta
